

Vincent Iwuno

Cybersecurity Researcher & Full-Stack Software Engineer

Nigeria · Remote 0xvince@vincentiwuno.me github.com/Vlex127 linkedin.com/in/vincentiwuno vincentiwuno.me tryhackme.com/p/0xvince

PROFESSIONAL SUMMARY

Security researcher and full-stack engineer building production software while actively testing the security of systems — from email infrastructure and automated recon tooling to Next.js applications. Ships full-stack apps end-to-end and applies offensive-security knowledge with tools like Burp Suite and Nmap to find and fix vulnerabilities before they're exploited.

EXPERIENCE

Full Stack Software Engineer · Olympus Tech

2025 — present

- Owned the platform end-to-end — frontend, API, database, and deployment — shipping features from design through release.
- Built and maintained interfaces and backend services with Next.js, React, and TypeScript; cut report turnaround from hours to minutes via an automated delivery pipeline.
- Shipped 20+ features including REST APIs, auth flows, and containerized deployments; reduced onboarding friction with reusable component library.

MCP Server Developer · SecureOps — Open Source

2026 — present

- Built SecureOps MCP: a local security-auditing server (Model Context Protocol) with 14 rules, 39 regex patterns, and Python AST analysis — zero source code leaves the machine.
- Designed a multi-analyzer architecture (Regex, AST, File, Dependency) and 5 MCP tools with structured JSON output; produced SARIF v2.1.0 for GitHub Advanced Security.

Independent Security Researcher · Self-employed

2026 — present

- Architected a production mail server (Postfix + Brevo) with SPF, DKIM, and DMARC on a custom domain; 100% inbox deliverability across major providers.
- Deployed GoPhish phishing-simulation labs and a Python/Nmap recon pipeline that auto-emails formatted reports in seconds; documented research as technical blog posts.

CTF Competitor & Security Student · TryHackMe · HackTheBox

2025 — 2026

- Solved challenges across web, pwn, forensics, crypto, and OSINT; completed structured learning paths and documented writeups.

PROJECTS

SecureOps MCP

Python · MCP · SARIF

Local security auditing via LLM interface — regex + AST + filename scanning, risk-score dashboard, path-traversal protection.

Network Recon Automation Toolkit

Python · Nmap · SMTP

Python scripts that wrap Nmap, parse XML into readable reports, and auto-email findings — scan-to-report in one command.

Custom SMTP Mail Server

Postfix · DKIM · SPF · DMARC

Production mail server on Kali with full email authentication and 0 spam-folder delivery.

TECHNICAL SKILLS

Offensive Security: Burp Suite, Nmap, Metasploit, SQLmap, GoPhish, Hydra, OWASP Top 10, web & network exploitation

Development: Next.js, React, TypeScript, Python, Flask, JavaScript, SQL, Docker, REST APIs, Tailwind CSS

Reverse Engineering & Analysis: GDB, Ghidra, Wireshark, CyberChef, x86/x64, binary exploitation

Infrastructure & Email Security: Kali Linux, Linux administration, Postfix/SMTP, DNS, DKIM/SPF/DMARC, MCP

OSINT & Recon: Maltego, Shodan, theHarvester, Google Dorking

EDUCATION & CERTIFICATIONS

B.Sc. Computer Science

2024 — 2028 (in progress)

Lagos State University, Lagos, Nigeria

Self-Directed Security Training

2024 — 2025

Hands-on Kali lab work in networking, ethical hacking, and OWASP Top 10; competitive CTF play on TryHackMe and HackTheBox.

Currently working towards professional certifications in offensive security.
